

if a number is like this and

$$\frac{40}{100} = 40\%$$

$$4 \times 10 = 40$$

$$3 \times 8 = 24$$

$$\frac{3}{8} = 24\%$$

So you can also see even by the % is clearly more also I multiplied $4 \times 10 = 40$ and $3 \times 8 = 24$ so clearly $\frac{4}{10}$ is the closer to a half and 40 is (from the x's) is also closer ^{to 50} than 24. So $\frac{4}{10}$ is larger and closer to $\frac{1}{2}$.
